

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

1. (currently amended) A test fixture for use in testing a device, the test fixture comprising:
  - (a) a base component;
  - (b) a first rail and a second rail coupled to the base component;
  - (c) a top component comprising a plate spaced from and parallel to the base component and coupled to the first and second rails wherein the base component, first rail, second rail, and top component at least partially define an enclosure that can support a device during testing; and
  - (d) an interposer coupled to the first and second rails.
2. (currently amended) The fixture of claim 1 claim 4 wherein the fixture achieves the base component, the first and second rails, and the top component are configured to achieve vibration damping similar to that achieved by a Golden Fixture.
3. (currently amended) The fixture of claim 1 claim 4 further comprising at least one roller disposed within a recess in each of the first and second rails.
4. (currently amended) A test fixture comprising:
  - (a) a base component;
  - (b) a first rail and a second rail coupled to the base component;
  - (c) a top component coupled to the first and second rails, the top component comprising The fixture of claim 1 wherein the top component has at least one roller coupled to the top component ; and
  - (d) an interposer coupled to the first and second rails.

5. (currently amended) The fixture of ~~claim 1~~ claim 4 wherein the base component is coupled to a pan.
6. (currently amended) The fixture of ~~claim 1~~ claim 4 wherein the base component is configured to allow air flow around a device being tested.
7. (currently amended) The fixture of ~~claim 1~~ claim 4 wherein the first rail and the second rail are configured to allow air flow around a device being tested.
8. (currently amended) The fixture of ~~claim 1~~ claim 4 wherein the top component is configured to allow air flow around a device being tested.
9. (currently amended) The fixture of ~~claim 1~~ claim 4 wherein the base component comprises
  - (a) two rail receiving plates; and
  - (b) at least two braces coupled to the two rail receiving plates.
10. (original) The fixture of claim 9 wherein the at least two braces are configured to allow air flow around a device being tested.
11. (original) The fixture of claim 9 wherein the at least two braces comprise:
  - (a) at least two main braces, each main brace having an arch structure configured to allow air flow; and
  - (b) at least one secondary brace disposed between the at least two main braces, the at least one secondary brace configured to allow air flow.
12. (currently amended) A test fixture comprising:
  - (a) a base component;
  - (b) a first rail and a second rail coupled to the base component;
  - (c) a top component coupled to the first and second rails;

- (d) an interposer coupled to the first and second rails; and
- (e) The fixture of claim 1 further comprising an ejection mechanism coupled to the fixture, the ejection mechanism comprising two rods selectively extendable through apertures in the top component.

13. (currently amended) The fixture of ~~claim 1~~ claim 4 wherein the interposer is configured to interface with a device to be tested.
14. (cancelled)
15. (new) The fixture of claim 12 wherein the base component, the first and second rails, and the top component are configured to achieve vibration damping similar to that achieved by a Golden Fixture.
16. (new) The fixture of claim 12 further comprising at least one roller disposed within a recess in each of the first and second rails.
17. (new) The fixture of claim 12 wherein the base component is coupled to a pan.
18. (new) The fixture of claim 12 wherein the base component, the first and second rails, and the top component are configured to allow air flow around a device being tested.
19. (new) The fixture of claim 12 wherein the base component comprises
  - (a) two rail receiving plates; and
  - (b) at least two braces coupled to the two rail receiving plates.
20. (new) The fixture of claim 19 wherein the at least two braces are configured to allow air flow around a device being tested.
21. (new) The fixture of claim 19 wherein the at least two braces comprise:

- (a) at least two main braces, each main brace having an arch structure configured to allow air flow; and
- (b) at least one secondary brace disposed between the at least two main braces, the at least one secondary brace configured to allow air flow.

22. (new) The fixture of claim 12 wherein the interposer is configured to interface with a device to be tested.
